the special kind of heating

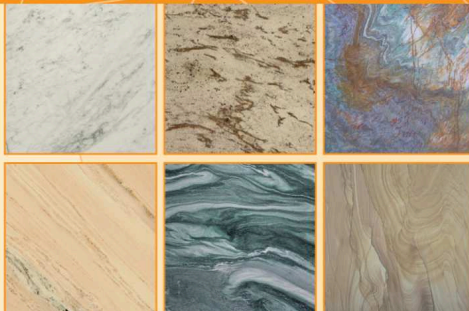

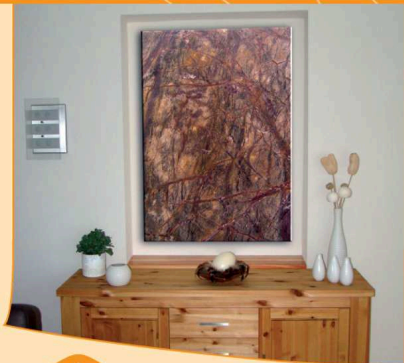

It's up to you -  
Create your personal design radiator!  
Material, size, shape, surface, edges, connections -  
all details are variable.

Each radiator is unique and a guaranteed  
eye-catcher in every room.

### It works in every normal (hydronic) heating system

Tibutherm radiators are especially designed for implementation in usual heating systems that work for example with oil, gas or wood. Natural stone radiators can be installed as simple as every other radiator. Connections are standardized and suitable for usual valve-sets or screw-joints.

### Enjoy cosy heat and luxury appearance

Tibutherm radiators match the cosy heat of a tiled stove or a fireplace with the comfort of a normal radiator. Due to the flat style there is not much place needed. Nature provides beautiful colours and unique textures. That makes of every radiator an incomparable work of art to decorate your home. Combine both features and get a real interior-highlight.

Easy installation by each heating plumber.
